

ABOUT sans âge

sans âge was founded upon the 40 year-old science behind the highly acclaimed Danné Montague-King professional clinic treatments offered throughout the world.

The research technicians at sans âge believe there is no such thing as "anti-ageing", an industry buzz-word for many years, or so-called miracle ingredients. Instead, our team focuses on AGE MANAGEMENT following the theories of internationally recognized skin guru Danné King.

If there would be one person to be credited in turning the history of professional skin therapy into what it is today, Danné would be that person. He has inspired doctors and therapists in over 20 countries to re-evaluate how they treat their clients and to avoid the hype that often accompanies much of the marketing of products and machines.

sans âge is a French phrase that translates to "without age" or "ageless". We at sans âge believe that anyone can be on the road to ageless skin by using the proper products in the appropriate way. Everyone deserves the opportunity to look better, regardless of age. Our credo: "age doesn't matter – looking good does".

transdelivery C

sans âge transdelivery C

sans âge has created and formulated an incredible serum with vitamin C complexes that aid in reversing and preventing signs of biological and environmental ageing by significantly increasing production of collagen and elastin, thus resulting in firmer, younger-looking skin.

It is recommended to be used by men and women of all ages, ethnicities, and skin types and is essential in reversing the signs of ageing by helping to diminish wrinkles and pigmentation.

transdelivery C delivers one of the most powerful topical formulations of vitamin C to the skin. Its potency is achieved through an unusual blend of both active and stable pharmaceutical grade forms of vitamin C. It is then combined with vitamin B5 for even faster, more effective results.

The following benefits of vitamin C may be achieved with the use of *transdelivery C*:

- **Promotes collagen production for long-term reduction of fine lines and wrinkles**
- **Helps create elastin which in turn firms and tightens the skin**
- **Helps to rebuild sun-damaged and photo-aged skin**
- **Helps even skin tone and diminish appearance of hyperpigmentation**
- **Helps regulate skin keratosis allowing cells to look healthier longer**
- **Helps increase dermal hydration and thickness of skin**
- **Benefits acne, skin lesions and helps promote wound healing**

WHO SHOULD USE *transdelivery C*?

Collagen fibers, the network that keeps our skin firm as in youth, are made by the fibroblast cells along with elastin, the fibers that snap the skin back tight when it is removed. *transdelivery C* is formulated to "kick start" the production of fibroblast cell activity in skin that is starting to show signs of ageing and loss of elasticity.

Although men and women and certain ethnic groups show signs of ageing differently, everyone collectively can benefit by the ingredients in *transdelivery C* that target this important activity in the skin. In addition, individuals with acne or pigmentation problems will benefit from the regulatory effect vitamin C has on cell proliferation and melanin production.

DIRECTIONS FOR USE:

1. Cleanse the face with your sans âge cleanser and spray with *moisture mantle*.
2. Apply *transdelivery C* to the entire face with particular attention to eyes and neck. Pump a few drops into the palm of your hand and massage into your skin. For more severe wrinkles, a little extra serum can be applied to spot areas using light fingertip massage motions.
3. Spray again with *moisture mantle* before applying sans âge *total delivery* (betaglucan crème) or other sans âge target area products.

KEY INGREDIENTS:

Magnesium ascorbyl phosphate

Stabilized form of vitamin C which helps support the production of collagen and elastin while regulating cell proliferation and melanin production.

Ascorbyl glucoside

Stabilized form of vitamin C which helps support the production of collagen and elastin while regulating cell proliferation and melanin production.

Sodium ascorbate

Stabilized form of vitamin C which helps support the production of collagen and elastin while regulating cell proliferation and melanin production.

Ascorbic acid

Standard form of vitamin C which helps support the production of collagen and elastin while regulating cell proliferation and melanin production.

Panthenol

Provitamin B5 helps condition the skin and lock the vitamin C in for maximum utilization.

sans âge uses a combination of the most potent and stable forms of vitamin C to provide maximum benefits for both collagen-enhancing and anti-oxidant properties. The sans âge formulas made from these ingredients are all recognized by the skin, providing maximum benefits. It is formulated in a gel base for targeted delivery deep within the skin. As with all sans âge products, only the safest preservatives are used and all are paraben and urea free. We do not test any of our products on animals.
